Corner Drive

- Additional head lock bar improves sealing and for security at the top of the frame.
- Positioned opposite of hinge, providing a dedicated locking point 3" from top corner.
- Integrates seamlessly with the full-length lock for and tie bar assembly for smooth, reliable operation.
- Boosts structural performance with added locking engagement.
- Standard on sizes 35"x65" and available as an optional upgrade for other sizes.

Lock bar and handle

- Adjustable lock pins allow post-installation compression adjustments for a customized fit.
- Patented mushroom pin design prevents disengagement from strikers, enhancing reliability.
- Audible "click" and multiple locking points provide added safety and security.
- Durable composite strikers ensure smooth, metal-free engagement and long-term strength.
- Handle includes integrated gaskets for a tight seal and improved air infiltration control.

Operator

- Bi-directional fastening system (four vertical and two lateral screws) ensures stability and eliminates rocking during operation.
- Smooth, effortless operation with reduced force required at the crank handle.
- Durable powder-coated finish resists corrosion, while low-friction components minimize effort during use.
- Easily adjusts with Allen wrench for convenience and precision.
- Roller sash lift realigns the sash smoothly back into position, ensuring square operation and reducing drag if any misalignment occurs.
